

AP Research Summer Assignment

Hello AP Research students. We are going to have an interesting year ahead of us. You are going to challenge yourself in new and exciting ways. Finding an area of interest and developing a question is the first step, and often most challenging one.

So here is your first assignment. Think of THREE areas that really interest you. There is science in everything. Find two research journal articles on each of the topics. I suggest you look at www.sciencenews.org to start you out and search their work cited for suggested journals. Read the articles, post the links if available, give an overview of each article and present an idea of what research could be done that relates to the topic.

<https://www.springboard.com/blog/free-public-data-sets-data-science-project/> It contains Free publically available data that could be used for a project. Post all replies on the Edmodo account and check for updates throughout the summer for guiding project questions.

Entering Students of Science Research II - Summer Assignment

Students will read the HOT ZONE and post comments on each part of the book. Your answers should be about a page in length- This is not a summary of the book, but more of a conversation you would have with someone else reading the book. Specific questions will be posted on Edmodo for each of part.
